

## Water Meter Installations

*Water meters are regulated under the City's Water & Sewer Bylaw. This document can be reviewed in full on our website or by contacting City Hall.*

Before the City will turn on water at any property, the following needs to be in place:

1. Installation of an inside water meter
2. Installation of a shut of valve on each side of the meter
3. Installation of an outside meter readout at the front of the building

This work is the **responsibility of the property owner**, and should be done by a licensed plumber.

The City will not turn water on to a property until **all of the above** conditions have been met.

In addition, someone must be present at the property when the water is first turned on in order to make sure there are no leaks.
